M1121 Neutral & Supply Tester and connecting accessories

ARS Code: **08757**

The M1121 Neutral and Supply Tester kit measures volts and impedance in relation to the connected Active, Neutral and reference Earth to determine a safe or unsafe condition. It ensures the incoming Active and Neutral power connections to a customer's premises are correctly identified and safe to use before a power connection is made. The kit consists of the M1121 NST unit, one Dewar lead set, one hanging clip and one user manual.
